CENTERS

The University of Kansas
Medical Center

KU Medical Center Area Health Education Centers and the Kansas Overdose Data to Action Program are introducing Kansas Partners in Opioid Safety (KPOS).

KPOS is a unique opioid safety initiative for Kansas with two simple goals:

- Offer tools and resources for opioid safety
- Understand successes and challenges your practice and community face with opioid safety.

Utilizing our expertise in health care education, we have created content to deliver in one-on-one 15-minute sessions with providers. During these sessions we will discuss the most recent research data and evidence-based approaches for safe opioid practices. Topics include:

- Chronic Pain Management and CDC Guidelines
- Maximizing K-TRACS
- Tapering
- Medication-Assisted Treatment (MAT)
- Co-prescribing Naloxone

**Continuing education
credit is available.**

KPOS sessions are designed to meet the
Kansas Board of Healing Arts requirement
for Category III opioid education

To discuss participating, e-mail us at ahcepitt@kumc.edu or call our office at (620) 235-4040.
