The Kansas Healthcare Collaborative and the Kansas Medical Society are partnering with the Iowa Healthcare Collaborative to apply for a CMS Innovation Center funding opportunity to become a Practice Transformation Network.

What is a Practice Transformation Network?

A Practice Transformation Network is established when practices, health care systems, and others join to collectively share quality improvement expertise, best practices, coaching, and assistance to prepare for success in a value-based payment and delivery model.

Why should clinicians join?

- **Take ownership of healthcare transformation** to lead, guide and influence the future of care
- **Optimize** individual patients achieving positive health outcomes
- **Promote effective care coordination:** learn how to establish a medical home and/or medical neighborhood; apply effective techniques for engaging patients and families in care planning
- Spend **more time caring for patients** in your practice environment
- **Align with new and emerging federal policies** from the ground level; actively prepare your practice team to be successful under future value based payment models
- **Implement practice growing transformation solutions that work for you and your patients:** implement clinical performance measurement and reporting, quality improvement, patient-centric care, and population health management now before they are mandated through payment methods
- **Get the data you need** to demonstrate PTN value including monthly comparison data on your clinical performance compared to peer groups and the entire network
- **Generate additional clinic revenue** through appropriate ordering of tests/procedures to close gaps and align practice with evidence based care
- **Collaborate with colleagues nationally and in your designated transformation network** to accelerate your own innovative strategies
- **Maximize your ability to capitalize** on the new chronic care management fee allowance coming in the 2015 Medicare fee schedule
- **Increase revenue** available from some commercial payers and Medicaid based on improvement in clinical outcomes
